

Getting ready for human space exploration

Mankind is preparing for a new space age: space agencies are planning manned missions to the Moon and to Mars, while commercial ventures may open up the prospect for non-astronauts to visit other planets. Human Space Exploration gives us much to think about and discuss.

Join us for a multi-disciplinary discussion on the future of Human Space Exploration:

- **Dr Elisa Ferré** (Psychology) will explain how microgravity impacts on human physiology and in particular cognition.
- **Prof Jill Marshall** (Law) will reveal how law and human rights are applied in outer space.
- **Prof Adam Roberts** (English) will look at the presence of space exploration in Science Fiction.

Wed 14th November
6pm
Windsor Auditorium
